

# How to use Back Talk Systems Fix-It Stick™ as an Educational Tool for Your Patients

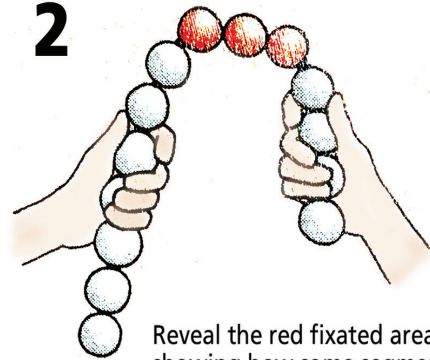

Learn how to release the **red fixated segment** to demonstrate the value of Chiropractic adjustments.

1

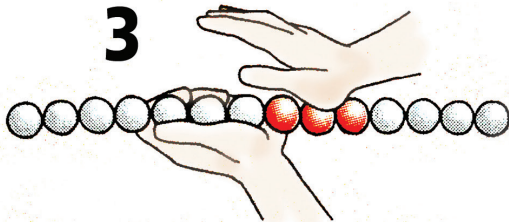

Covering up the red fixated area, demonstrate how each segment contributes to normal turning and bending.

2

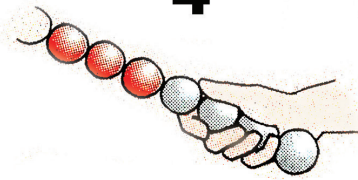

Reveal the red fixated area, showing how some segments can become "stuck" and not move properly.

3

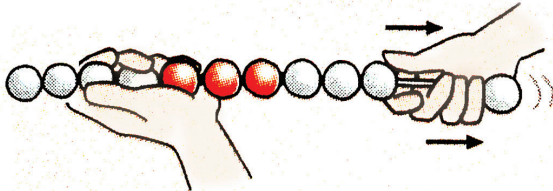

Perform a "mock adjustment" on the red fixated area.

4

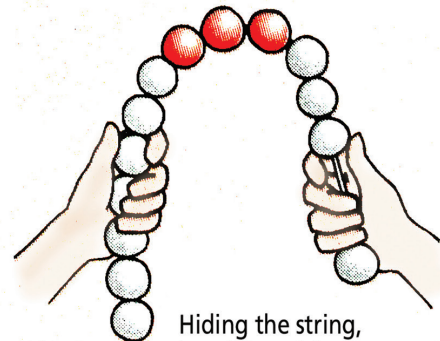

Position your little finger to "catch" the end ball (segment).

5

Using your hand to hide the string, pull the end ball (segment) until it stops. Grasp the exposed segment with your thumb and index finger.

6

Hiding the string, bend the stick showing restored motion in the red area.
